PERFORMANCE MONITORING REPORT

QUARTER 3
APRIL 2012 – DECEMBER 2012

Figures are provisional and may be subject to minor amendment.

CONTENTS

	MONITORING AGAINST IMPROVEMENT OBJECTIVE 1	2 - 6
	Accidental fires in dwellings	
	Injuries from accidental fires in dwellings	
	Deaths from accidental fires in dwellings	
RRC/C/005	Smoke alarm presence/absence in fires in dwellings	
	People escaping unharmed and unaided from accidental fires in dwellings	
	Home fire safety checks undertaken following a referral from a partner organisation	
	INCIDENT ACTIVITY REPORTING	7 - 16
	SUMMARY	7
	Overview of all incidents attended	
	FIRES ATTENDED	9 - 12
RRC/S/001	All fires – primary, secondary and chimney	
	All fires – deliberate and accidental	
RRC/S/003	Fires in non-domestic properties	
	SPECIAL SERVICE CALLS	13
	Emergency special service calls	
	FALSE ALARMS	15 - 16
RRC/C/002	Malicious false alarms	
RRC/C/003	False alarms from automatic fire alarms	
	False alarms made with good intent	
	GLOSSARY	17

IMPROVEMENT OBJECTIVE 1:

Preventing Deaths and Injuries from Accidental Fires in Dwellings

REPORTING YEAR – 2012/13						
Comparison against last year's figures are shown in the right-hand column of the table. Background shading - Green = improvement; Red = deterioration; Amber = no change						
↑ = increase this year ↓ = decrease this year → = no change pp percentage points						
	Q1	Q2	Q3	Q4	YTD	
Accidental fires in dwellings	97	123	104		324	↓ 5%
Injuries from Accidental Fires in Dwellings	8	8	13		29	↑ 8
Deaths from Accidental Fires in Dwellings	1	0	1		2	↓ 1
% of people who escaped unharmed and unaided from accidental fires in dwellings	83%	80%	73%		79%	↑ 2pp
Dwelling fires - smoke alarm activated	58%	56%	65%		59%	↓ 2pp
Dwelling fires – smoke alarm did not operate	29%	23%	26%		26%	↑ 1pp
Dwelling fires – no smoke alarm present	13%	21%	9%		15%	↑ 1pp
% of all Home Fire Safety Checks undertaken that originated from a referral from a partner organisation	40%	29%	26%		31%	↑ 1pp

LAST YEAR – 2011/12					
	Q1	Q2	Q3	Q4	YTD
Accidental fires in dwellings	112	84	146		342
Injuries from Accidental Fires in Dwellings	8	3	10		21
Deaths from Accidental Fires in Dwellings	1	0	2		3
% of people who escaped unharmed and unaided from accidental fires in dwellings	67%	82%	79%		77%
Dwelling fires - smoke alarm activated	63%	60%	61%		61%
Dwelling fires – smoke alarm did not operate	23%	23.5%	27%		25%
Dwelling fires – no smoke alarm present	14%	16.5%	12%		14%
% of all Home Fire Safety Checks undertaken that originated from a referral from a partner organisation	31%	29%	31%		30%

Accidental Fires in Dwellings and Casualties by Severity of Injury

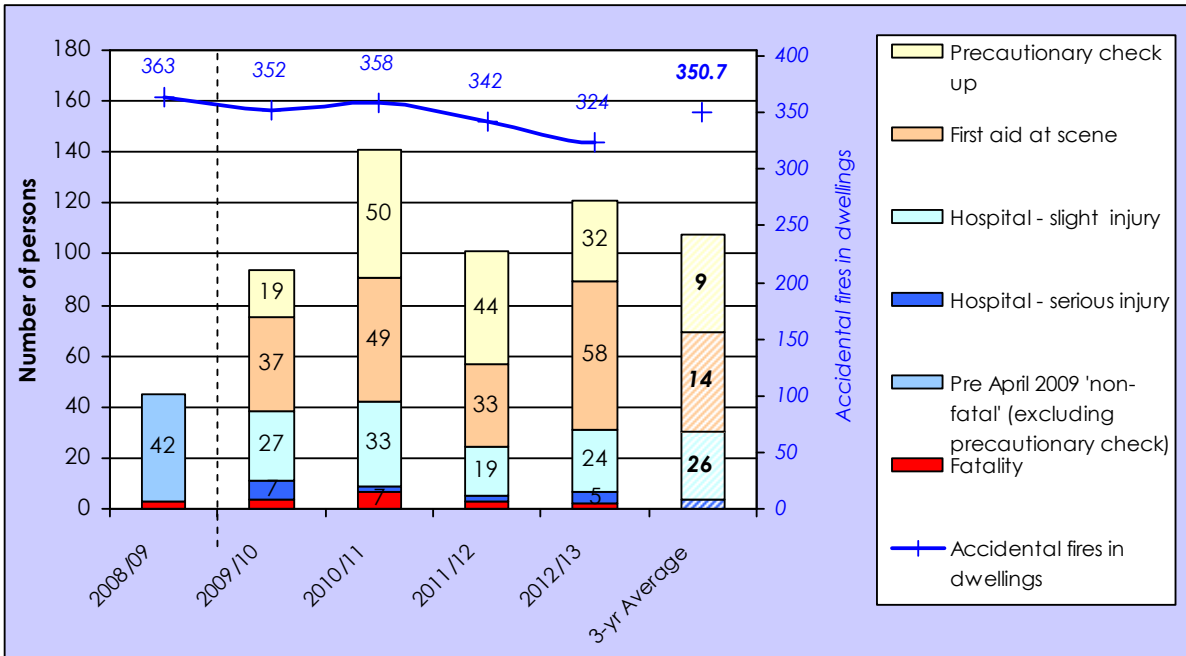

- **There were 5% or 18 fewer accidental fires in dwellings compared to 2011/12**

During the first three quarters of the year the Service attended 324 accidental fires in dwellings, which is less than in the previous year and the 3-year average.

Injuries from accidental fires in dwellings: 29 people sustained injuries at these fires – 24 were classified as slight injuries, and 5 as serious. These exclude precautionary check-ups and first aid given at scene, in accordance with national guidance for compiling national performance indicators.

Deaths from accidental fires in dwellings: During the first three quarters of 2012/13 there were two deaths from accidental fires in dwellings, one occurring on Anglesey (May 2012) and one in Denbighshire (November 2012).

Accidental Fires in Dwellings and Casualties by Severity of Injury

From April 2009 non-fatal casualties are recorded under four categories of severity:

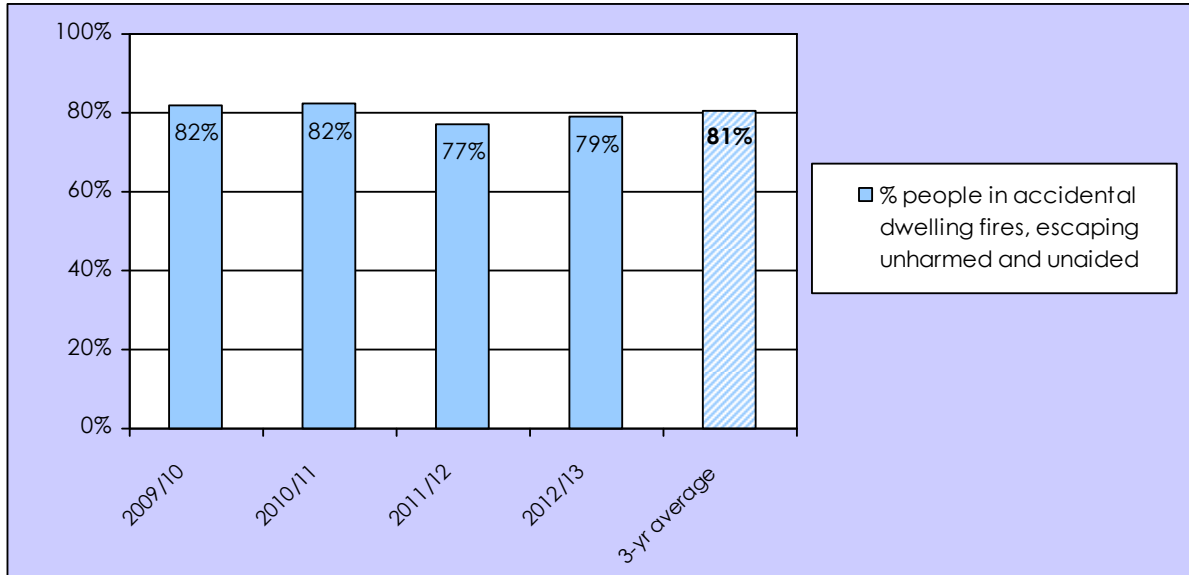

- victim went to hospital, injuries appear to be serious;
- victim went to hospital, injuries appear to be slight;
- first aid given at scene;
- precautionary check recommended – this is when an individual is sent to hospital or advised to see a doctor as a precaution, but having no obvious injury or distress.

Due to the change in April 2009 and the introduction of a 'fire-related injury' marker there is a possible discontinuity in the number of non-fatal casualties.

Accidental Fires in Dwellings – Escaped Unharmful, Unaided

- **79% of people in an accidental dwelling fire escaped unharmed and without the need for assistance from crews at the fire.**

% of people in accidental dwelling fires who escape unharmed and unaided

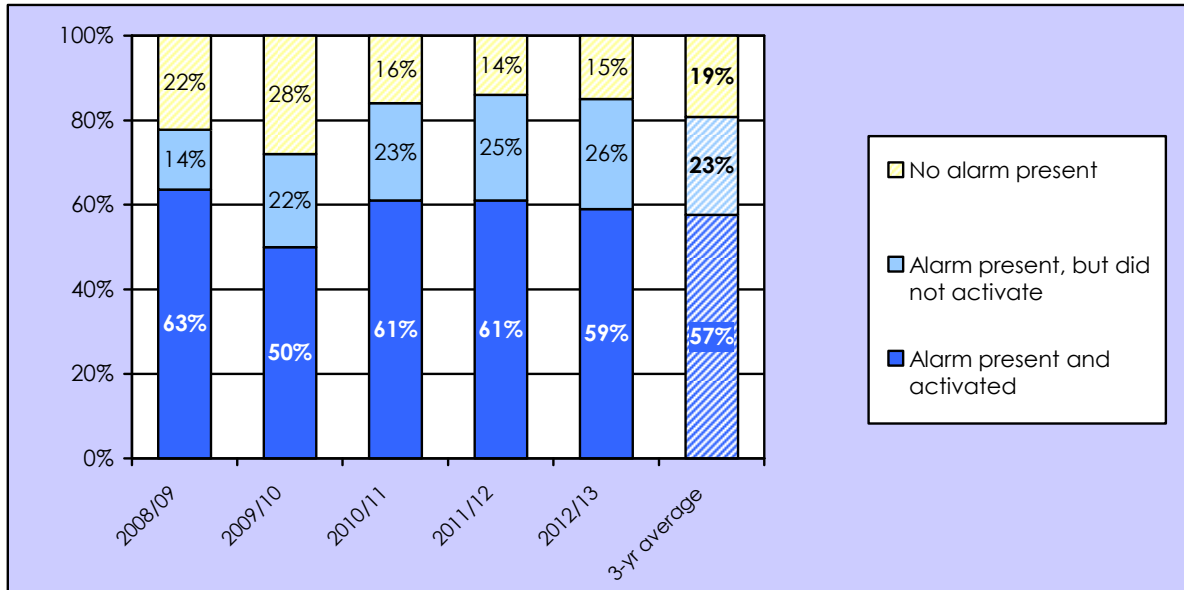

With early warning from a working smoke alarm and a rehearsed escape plan tailored to the individual needs of the occupants of the dwelling, people can maximise their chances of escaping unharmed from a dwelling fire without having to rely on being rescued by a fire crew.

The 79% achieved in the three quarters of this year relates to a total of 584 people, of whom 461 were able to exit the dwelling safely without having to be rescued by a fire crew.

Fire in Dwellings: Presence of Smoke Alarms

- **15% of dwellings experiencing a fire did not have a smoke alarm, which is 1 percentage point higher than in 2011/12.**

Fires in Dwellings: Presence of smoke alarms

During the period the Service attended 352 fires in dwellings.

15% of all the dwelling fires attended in the first three quarters of the year (52 fires) occurred in dwellings where no smoke alarm had been fitted. This is slightly higher compared to the same time last year, and although lower than the 3-year average, is a positive indication of levels of smoke alarm ownership.

In 59% of the dwelling fires attended (209 fires), an alarm was fitted and activated. This percentage of the total is lower than last year but remains above the 3-year average.

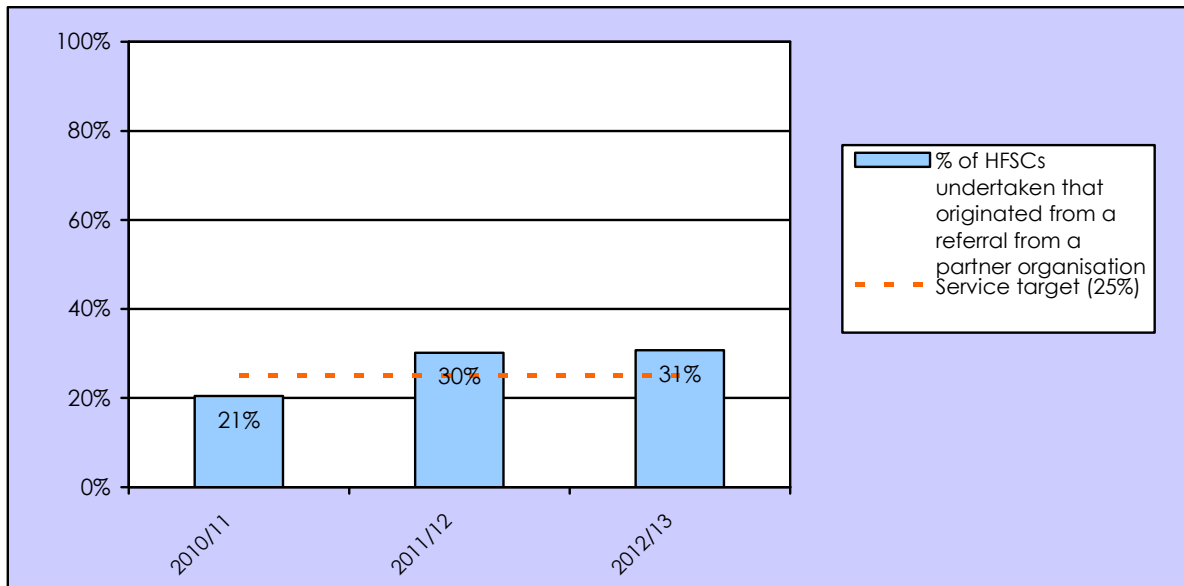

In the third category – where an alarm was fitted but it did not activate – there was a slight increase compared to the previous year and the 3-year average, to 26%. The main reason why alarms did not activate despite being fitted in the property is that the fire was not close enough to the detector to trigger the alarm.

Home Fire Safety Checks (HFSCs)

- **31% of home fire safety checks were completed following a referral from a partner organisation.**

During the first three quarters of the year 4,330 (31%) out of the 14,106 home fire safety checks completed were ones that had originated from partner organisation referrals (agency referrals), helping high risk groups staying safer in their homes – this exceeded the Service's own 25% target.

% of all Home Fire Safety Checks undertaken that originated from a referral from a partner organisation

INCIDENT ACTIVITY REPORTING: Summary of All Incidents Attended

REPORTING YEAR – 2012/13						
Comparison against last year's figures are shown in the right-hand column of the table. Background shading - Green = improvement; Red = deterioration; Amber = no change						
↑ = increase this year ↓ = decrease this year → = no change pp percentage points						
	Q1	Q2	Q3	Q4	YTD	
Total incidents attended	1,712	1,787	1,713		5,212	↓ 11%
Total fires	621	522	531		1,674	↓ 30%
Total special service incidents	287	323	383		993	↑ 26%
Total false alarms	804	942	799		2,545	↓ 5%

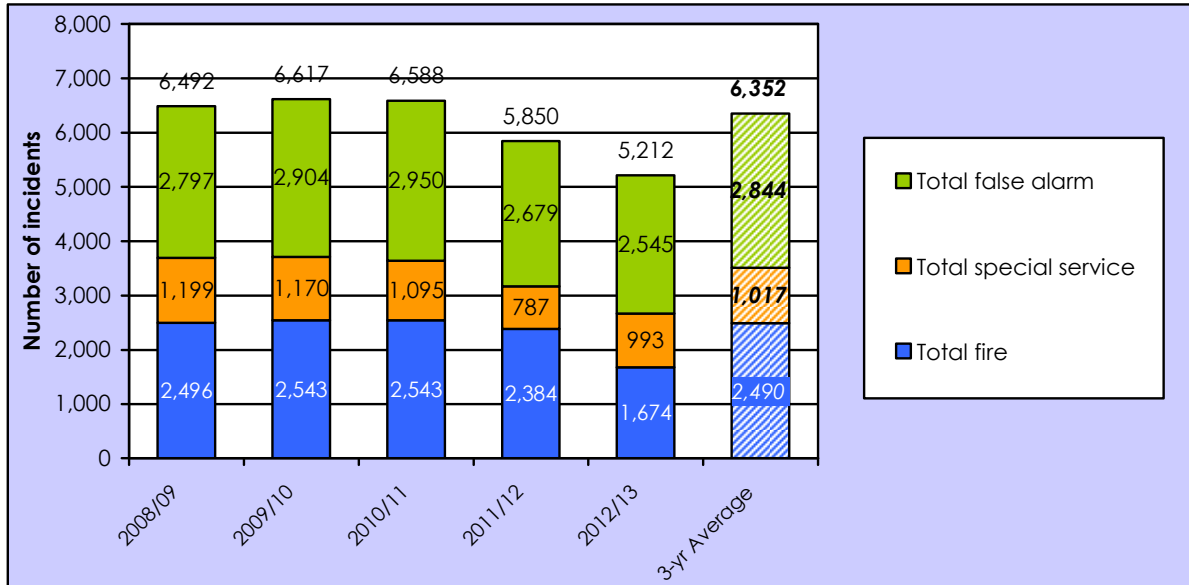

LAST YEAR – 2011/12					
	Q1	Q2	Q3	Q4	YTD
Total incidents attended	2,125	1,927	1,798		5,850
Total fires	1001	708	675		2,384
Total special service incidents	265	261	261		787
Total false alarms	859	958	862		2,679

All Incidents Attended:

- **There was a decrease of 11% or 638 fewer incidents compared to the same period last year.**

During the first three quarters of the year the Service attended 5,212 incidents, which is notably fewer than in previous years, and continues the overall downward trend. There was a decrease in the number of false alarm and fire incidents, but an increase in special service incidents.

All Incidents Attended, by Type

INCIDENT ACTIVITY REPORTING: Fires Attended

REPORTING YEAR – 2012/13						
Comparison against last year's figures are shown in the right-hand column of the table. Background shading - Green = improvement; Red = deterioration; Amber = no change						
↑ = increase this year ↓ = decrease this year → = no change pp percentage points						
	Q1	Q2	Q3	Q4	YTD	
Total fires	621	522	531		1,674	↓ 30%
Primary fires	259	320	257		836	↓ 15%
Secondary fires	311	188	189		688	↓ 46%
Chimney fires	51	14	85		150	↑ 13%
All deliberate fires	267	202	198		667	↓ 39%
All accidental fires	354	320	333		1,007	↓ 22%
Fires in non-domestic properties	42	49	46		137	↓ 16%

LAST YEAR – 2011/12					
	Q1	Q2	Q3	Q4	YTD
Total fires	1,001	708	675		2,384
Primary fires	338	302	343		983
Secondary fires	623	392	253		1,268
Chimney fires	40	14	79		133
All deliberate fires	495	358	233		1,086
All accidental fires	506	350	442		1,298
Fires in non-domestic properties	57	53	53		163

Fires:

- **There was a decrease of 30% or 710 fewer fires compared to the same period last year.**

During the first three quarters of the year the Service attended 1,674 fires, which is the lowest number for the period since at least 2008/09. Overall numbers of primary and secondary fires decreased, whereas chimney fires increased. In addition to the Service's fire safety prevention activities it is likely that the prolonged wet weather had a significant impact on fires.

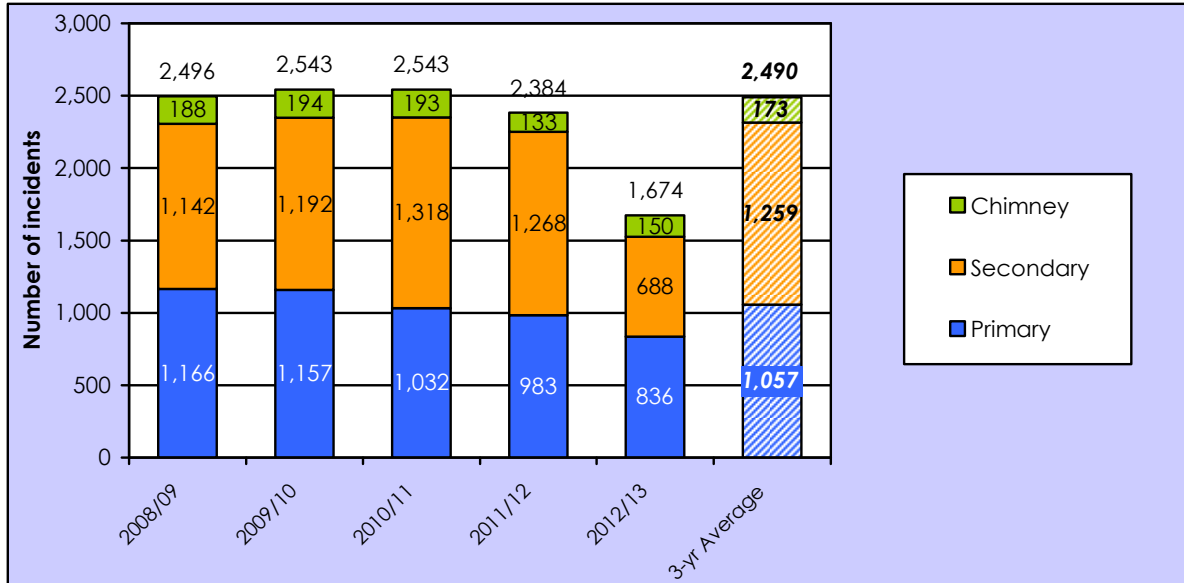

Fires: Type

Primary fires reduced by 15% or 147 fewer incidents overall, compared to the first three quarters of 2011/12, continuing the downward trend.

During the first three quarters of the year **secondary fires** reduced significantly by 46% or 580 fewer incidents compared to the same period in 2011/12. This reduction is apparent for outdoor fires - grassland fires in particular – reflecting the wetter than average weather throughout the year.

Chimney fires increased by 13% or 17 more fires, but were lower than the 3-year average. Nearly 60% of these fires occurred during the third quarter, reflecting the cold, damp weather.

All Fires Attended, by Type

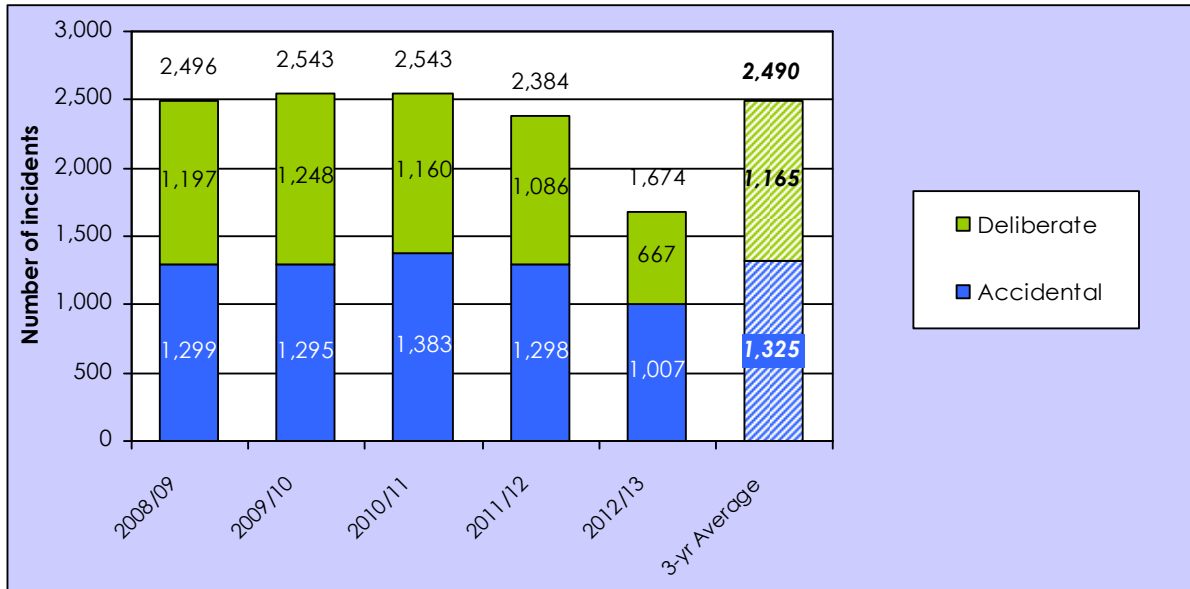

Fires: Motive

The overall reduction in fires is reflected in both categories of fires started deliberately and those started accidentally. The number of deliberate fires fell significantly compared to the same period last year (39% fewer fires) and well below the 3-year average.

In addition to our fire safety prevention activities it is likely the wet weather this year had a significant impact on fires.

All Fires Attended, by Motive

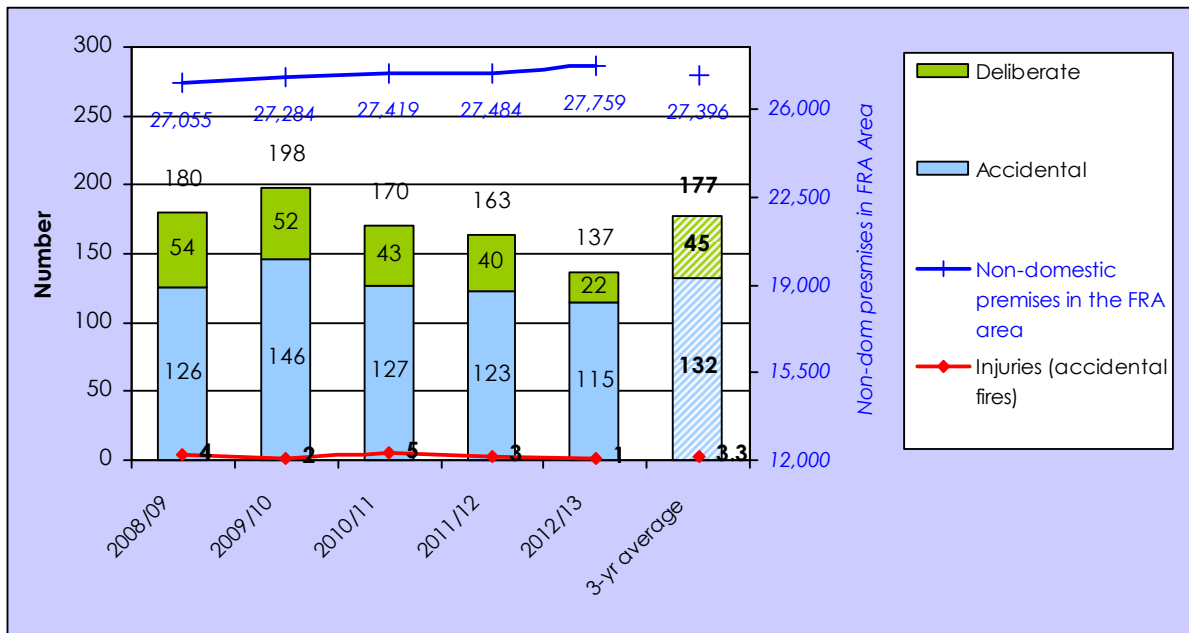

Fires: Non-domestic premises:

- **There was a decrease of 16% or 26 fewer fires in non-domestic premises compared to the same period last year.**

During the first three quarters of the year the Service attended 137 such fires, which is lower than the previous year and the 3-year average and continues the downward trend.

Fires in Non-domestic Premises and Casualties

INCIDENT ACTIVITY REPORTING: Special Service (non-fire) Incidents Attended

REPORTING YEAR – 2012/13						
Comparison against last year's figures are shown in the right-hand column of the table. Background shading - Green = improvement; Red = deterioration; Amber = no change						
↑ = increase this year ↓ = decrease this year → = no change pp percentage points						
	Q1	Q2	Q3	Q4	YTD	
Total special service incidents	287	323	383		993	↑ 26%
Road traffic collisions (RTC)	105	92	124		321	↓ 12%
Other than RTC	182	231	259		672	↑ 59%

LAST YEAR – 2011/12					
	Q1	Q2	Q3	Q4	YTD
Total special service incidents	265	261	261		787
Road traffic collisions (RTC)	114	120	131		365
Other than RTC	151	141	130		422

Special Service Incidents:

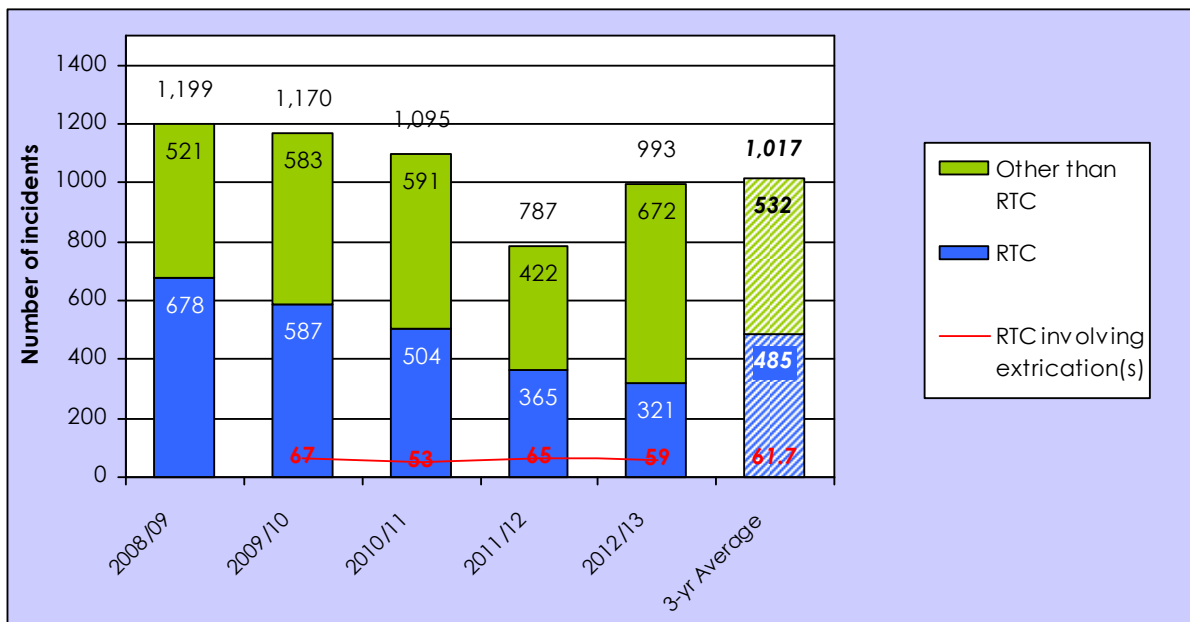

- **There was an increase of 26% or 206 more special service incidents compared to the same period last year.**

During the first three quarters of the year the Service attended 993 special service incidents, which is higher than the previous year but remains below the 3-year average.

The overall downward trend for special service incident **RTCs** continued. However, special service incidents **other than RTCs** increased by 59% or 250 more incidents, which is higher than the 3-year average.

The increase in special service incidents is attributable, in part, to the adverse weather during the period. A ship ran aground in gales during April; localised flooding during the wetter than average spring and summer, led to a surge in flooding and related incidents; and, at the end of November the succession of heavy rainfall events affected many areas across Wales causing significant flooding, along with further disruption caused by strong winds.

Special Services Attended, by Type

INCIDENT ACTIVITY REPORTING: False Alarms Attended

REPORTING YEAR – 2012/13						
Comparison against last year's figures are shown in the right-hand column of the table. Background shading - Green = improvement; Red = deterioration; Amber = no change						
↑ = increase this year ↓ = decrease this year → = no change pp percentage points						
	Q1	Q2	Q3	Q4	YTD	
Total false alarm	804	942	799		2,545	↓ 5%
Malicious false alarms	27	26	26		79	↓ 18%
False alarms made with good intent	313	319	278		910	↓ 9%
False alarms from AFAs in non-domestic properties	304	408	353		1,065	↓ 4%
False alarms from AFAs in other properties	160	189	142		491	↑ 2%

LAST YEAR – 2011/12					
	Q1	Q2	Q3	Q4	YTD
Total false alarm	859	958	862		2,679
Malicious false alarms	37	34	25		96
False alarms made with good intent	349	362	285		996
False alarms from AFAs in non-domestic properties	324	392	389		1,105
False alarms from AFAs in other properties	149	170	163		482

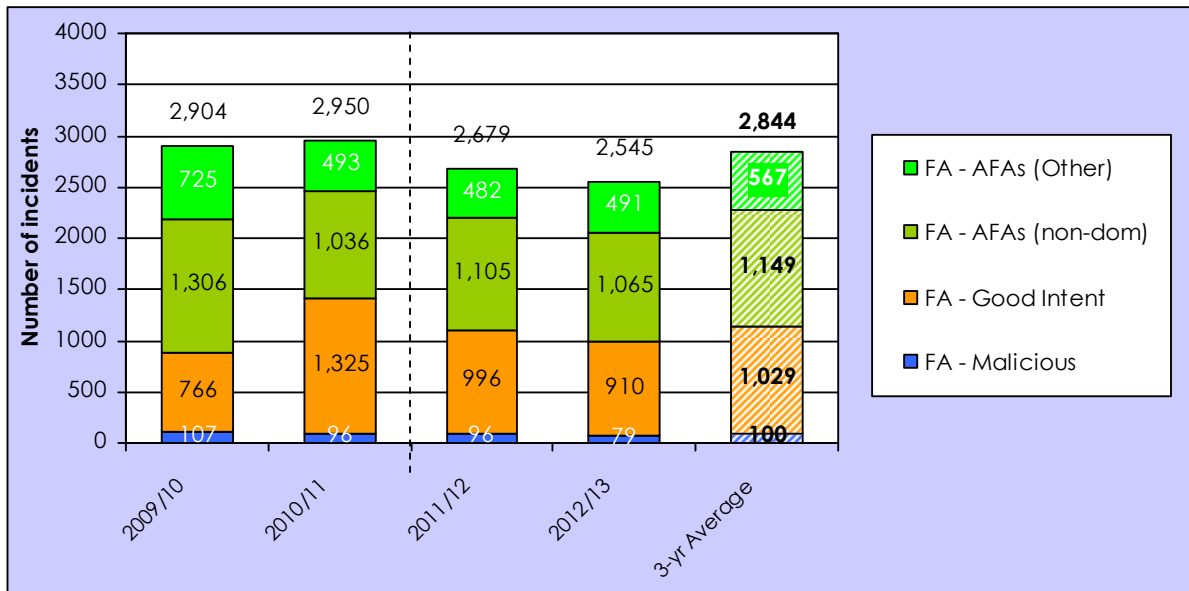

False Alarms:

- **There was a decrease of 5% or 134 fewer false alarms attended compared to the same period last year.**

During the first three quarters of the year the Service attended in response to 2,545 calls for assistance that later turned out to be false alarms. This number is lower than in previous years.

The overall numbers of false alarms in the 3 main categories of: automatic fire alarm (AFA) false alarms; malicious false alarms; and false alarms made with good intent have all decreased.

False Alarms Attended, by Type

The realigning of categories of false alarms shortly before the start of the 2011/12 financial year, in light of national discussions, introduced a shift in the proportion of false alarms classified as 'automatic fire alarm (AFA) false alarms' and those classified as 'false alarms made with good intent'.

This made it impossible to make a like-for-like comparison of 2011/12 figures against the previous year's figures in respect of these two categories of false alarm. This is not expected to affect comparison between the 2011/12 and 2012/13 figures.

GLOSSARY

Fires	All fires fall into one of three categories – primary, secondary or chimney.
Primary Fires	<p>These are fires that are not chimney fires, and which are in any type of building (except if derelict), vehicles, caravans and trailers, outdoor storage, plant and machinery, agricultural and forestry property, and other outdoor structures such as bridges, post boxes, tunnels, etc.</p> <p>Fires in any location are categorised as primary fires if they involved casualties, rescues or escapes, as are fires in any location that were attended by five or more fire appliances.</p>
Secondary Fires	<p>Secondary fires are fires that are neither chimney fires nor primary fires.</p> <p>Secondary fires do not involve casualties, rescues or escapes, and will have been attended by four or fewer fire appliances.</p> <p>Secondary fires are those that would normally occur in locations such as open land, in single trees, fences, telegraph poles, refuse and refuse containers (but not paper banks, which would be considered - in the same way as agricultural and forestry property - to be primary fires), outdoor furniture, traffic lights, etc.</p>
Chimney Fires	<p>These are fires in occupied buildings where the fire is confined within the chimney structure, even if heat or smoke damage extends beyond the chimney itself.</p> <p>Chimney fires do not involve casualties, rescues or escapes, and will have been attended by four or fewer fire appliances.</p>
Special Service Incidents	<p>These are non-fire incidents which require the attendance of an appliance or officer and include:</p> <ul style="list-style-type: none"> a) Local emergencies e.g. flooding, road traffic incidents, rescue of persons, 'making safe' etc; b) Major disasters; c) Domestic incidents e.g. water leaks, persons locked in or out etc; d) Prior arrangements to attend incidents, which may include some provision of advice and inspections.
False Alarm (general guidance)	<p>Where the FRS attends a location believing there to be an incident, but on arrival discovers that no such incident exists, or existed.</p> <p>Note: if the appliance is 'turned around' by Control before arriving at the incident it is not classed as having been attended and does not need to be reported.</p>
False Alarms - Malicious	These are calls made with the intention of getting the FRS to attend a non-existent incident, including deliberate and suspected malicious intentions.
False Alarms – Good Intent	These are calls made in good faith in the belief that the FRS really would attend a fire or special service incident.
False Alarms - AFA	These are calls initiated by fire alarm and fire-fighting equipment. They include accidental initiation of alarm apparatus or where an alarm operates and a person then routinely calls the FRS as part of a standing arrangement, i.e. with no 'judgement' involved, for example from a security call centre or a nominated person in an organisation).
